

TECHNICAL BULLETIN – DISINFECTION OF FOOD CONTACT SURFACES

SOP for Food contact surfaces:

- Dispense Disinfectant into a clean bucket. Do not store a rag in the bucket.
- Remove gross soil from surfaces if needed
- Wipe surface with the disinfectant using a clean rag wetted with the solution from the bucket
- Allow the surface to remain wet for the dwell time. Rewet surface with disinfectant if needed to keep the surface wet for the entire dwell time per the EPA approved label
- Rinse the surface with clean potable water
- Apply sanitizer to the surface and allow to drain and air dry

For a non-food contact surface:

- Dispense disinfectant into a clean bucket. Do not store a rag in the bucket.
- Remove gross soil from surfaces if needed
- Wipe surface with the disinfectant using a clean rag wetted with the solution from the bucket
- Allow the surface to remain wet for the dwell time of the disinfectant, per the EPA approved label.
- Rewet surface with disinfectant if needed to keep the surface wet for the entire dwell time.
- It is important that they do not store a rag in the bucket.
